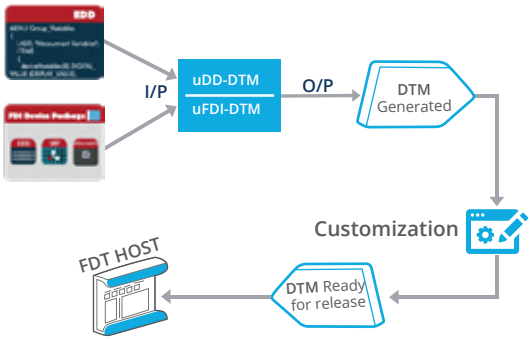
DD/FDI Package to DTM + Customization = Easy Integration



The device integration standards like EDDL, DTM and FDI allows consistent commissioning, configuration and maintenance of field devices. Based on the customer need, device suppliers need to provide and maintain EDDL, FDI Device Package and / or DTM. And in the entire Device Development Cycle, DTM will be the last piece in the puzzle and will always go through the tight schedule and budget constraint.

Based on decades of experience in offering more than 500+ device integration solutions to device suppliers, we at Utthunga understand the challenges and have an innovative solution for developing DTM based on existing DD or FDI package using uFDI-DTM/ uDD-DTM tool.

Our solution has four simple steps :

1. Take your DD/FDI Device Package
2. Convert that to FDT 1.2x/2.x DTM
3. Understand your requirement for Customization
4. Deliver the customized generated DTM

Features:

- Supports FDT 1.2.x, 2.0 standards and complies to FDT style guide
- Supports HART, PROFIBUS and FF (FDT 1.2x) protocols
- UIP hosting support including direct access
- Device Health Status
- Offline/Online Configuration
- Upload/Download
- Interoperable all major FDT Hosts

We offer a comprehensive, robust, customizable, easy maintenance and cost-effective conversion tools. We can help you to solve the last piece of the puzzle in your device development cycle. For more details connect with us.
